

REACH Spring Newsletter

REACH is looking for it's next project!

Do you have an idea for an important paediatric research question?
We would love to work with you!

We are officially accepting proposals for **the next REACH research project**. You do not have to have any previous research experience and your proposal can be audit, quality-improvement or research related. You will be fully supported by the REACH central committee throughout the application process. This is an amazing opportunity to gain multi-center research experience. To complete a project submission simply complete the project proposal form. Find out more details about the project selection process on [our website](#).

Deadline for proposal submission is the 17th of July, 2023!

FIRE

FIRE Data Collection underway!

FIRE is a pan-London retrospective study of infants under 3 months presenting with fever and REACH's first study! our aim is to outline variations in management and outcomes, and to examine the performance of local and national guidelines in identifying infants with serious bacterial infections.

We are very excited that R&D approval is already in place at 17 London trusts. Data collection has started across these trusts and will be running until September 2023. We anticipate including almost 2000 eligible patients in our analysis.

A massive thank you to all our amazing trainee and consultant leads at London-based trusts for helping REACH set up this important project and their ongoing hard work!

Watch this space for preliminary results and find out more about FIRE on our [website!](#)

Congrats to the **Barnet Hospital** Team for being the first to send in search methodology and potential case list numbers and to the **St Mary's** Hospital team for the most REDCap records entered so far! Keep up the amazing work :)

Find out more about FIRE!

Paeds Priority Setting Project (PaedsPSP)

Thank you to everyone who participated in our Paediatrics Priority Setting Project!

We received so many amazing questions and are in the process of analysing all of the submitted questions and reviewing the existing evidence. All submitted questions will be sorted and sent back to participating London-based paediatric doctors to prioritise. A final set of top questions will be used to inform further research, for REACH projects or beyond.

Watch this space for initial results and find out more on our [website!](#)

PEAR Study

Thank you to all trainees that took part in the PEAR Study!

PEAR (Paediatric trainee Experience in multi-site Audit and Research) is a multi-centre prospective cross-sectional study to evaluate the current level of experience in research and quality improvement work amongst London paediatric trainees. This will provide baseline information and highlight unmet training needs to guide future steps. Over a three month period we have received data from more than 145 London paediatric trainees. Have a look at the initial PEAR results specific to REACH that we presented at this year's LSP Conference [here](#).

All your responses have been analysed and we are excited to present the analysis at this year's RCPCH Conference!

Find out more about PEAR on our [website!](#)

Want to get involved in REACH?

We'd love to have you - find out more about how you can join REACH on our [website](#) or send us an [e-mail!](#)
